

About Course APS-A700:

Advanced Repackaging with Wise Package Studio

Expand your Wise Package Studio® knowledge in the Advanced Repackaging with Wise Package Studio course. In this course, you focus on learning diagnostic and troubleshooting skills to adeptly solve your individual application issues. Additionally, receive answers to process and product questions encountered in your daily repackaging work using Wise Package Studio and learn additional aspects about the product to further simplify repackaging tasks.

This class is fast-paced, deals with complex repackaging issues, and contains challenging repackaging scenarios. Following a brief review of Microsoft® Windows® Installer, Wise Package Studio, and exclusion lists, the class immediately delves into learning about and working with complex applications.

Course Objectives

- Apply the fundamentals of Microsoft Windows Installer technology to your installation.
- Build an exclusion list and establish a repackaging environment that conforms to best practice guidelines.
- Repackage and troubleshoot complex applications.
- Apply options such as merge modules, macros, and custom actions to complex repackaged applications.
- Run validation checking on packages.
- Manage conflicts in packages.
- Add security to packages.

Prerequisites

- Have taken Repackaging with Wise Package Studio *or* have experience using Wise Package Studio AND
- Have repackaging experience using Microsoft Windows Installer (.MSI) technology
- Have experience using the Microsoft RegEdit tool

Audience

- System administrators looking for advanced techniques to expand their existing repackaging skills.
