

Migrate Faster with AOK

AOK software accelerates and simplifies application compatibility testing and remediation throughout the entire migration process and continuing application lifecycle. From planning to deployment, the automation offered by the AOK solution removes human error and costly specialist resource throughout, not to mention dramatically reducing the duration of the project.

Moreover, as the AOK Workbench brings together the functionality of all AOK modules, the entire process can be centrally managed, allowing for functionality to be added and applied when needed to support future progression into new technologies.

AOK is modular and as such its functionality can be tailored to suit the needs of your organisation and your project.

Automated analysis and reporting is provided by AOK Test-It, to which AOK Browse-It, AOK Virtualise-It, AOK Office-It, AOK QA-It and AOK Manage-It add additional checks for specific application compatibility risks.

Automated remediation is provided by AOK Fix-It, to which AOK QA-It and AOK Virtualise-It add additional fixing for specific virtual platforms and best practice compliance.

Automated conversion to virtual formats is offered by AOK VReady-It.

This process creates native applications, virtualised applications and/or web-based media ready for UAT and deployment on the platform of choice.

| Client | Number of Desktops | Number of Applications | Project Scope | Time/Cost Saving |
|---------------------------|--------------------|------------------------|---|--|
| Large Global Bank | 300,000 | 16,000 | 1000 apps migrated within 30 days, 8000 apps automatically fixed. | US \$2.5 Million |
| Global Pharmaceutical | 100,000 | 4,000 | Assessed apps in 2 weeks | US \$152,000 |
| Global Petrochemical | 70,000 | 8,000 | Assessed apps in 2 months | Migration start date brought forward by 4 months |
| Global Insurance (UK arm) | 13,000 | 1,600 | Assessed apps in 30 days | Accelerated project by 3 months |
| Global Investment Bank | 65,000 | 6,000 | All apps assessed and remediated in 6 months | Accelerated project by 2 months |

Get there faster with AOK:

- Windows 7
- 64
- Windows Server 2008
- Microsoft Office 2010
- Windows Internet Explorer 8
- Windows Internet Explorer 9
- Microsoft Application Virtualization
- CITRIX
- Symantec
- vmware

- 95% of applications working on Windows 7
- 90% reduction in testing time
- 75% quicker delivery of packages
- Improve consistency and quality of testing and fixing
- Reduce post-deployment support issues
- 70% cost savings across the entire testing and packaging process

AOK – Your Total Solution

Enhanced conversion now reads ANY installation format into the AOK Workbench

By creating an MSI equivalent version of the package through a pseudo-install on a virtual machine, AOK Convert-It solves the problem of compatibility testing of non-standard and legacy applications with lost media.

Bulk load your application estate and receive detailed RAG reporting in minutes

AOK Test-It provides fast, accurate and automated application compatibility testing and reporting for Windows 7, 64-bit and Windows Server 2008. This enables organisations to make an informed decision on the likely impact of the proposed migration project.

Automated remediation of many application compatibility issues

AOK Fix-It builds upon AOK Test-It functionality to include the automatic remediation of a large number of the issues identified. The detailed reporting and guidance provided by AOK Fix-It also dramatically accelerates any manual remediation that is required.

Detailed compatibility reporting for websites, web portals and web-based applications

Browser-based compatibility issues are a major blocker to Windows 7 migration projects. AOK Browse-It is an automated website and web application testing solution which speeds up the testing of Internet Explorer 8 and 9 compatibility issues.

Test for and fix application compatibility issues with virtualised platforms

AOK Virtualise-It offers application compatibility checks for Microsoft App-V, RDS, Citrix XenApp, VMware ThinApp and Symantec SWV. AOK Virtualise-It also supports the process to ensure applications have access to dependencies and will work on the target platform.

Ensure your application estate's inter-compatibility with Microsoft Office 2007 and 2010

AOK Office-It comprehensively examines application configuration and file details, identifying overlaps and file-level dependencies on information contained within the Office 2007/2010 installation.

Check for compliance with your organisation's specifications and Best Practice principles

AOK QA-It allows the user to author their own checks to automatically test applications for compliance with company and packaging (MSI) standards. It is also possible to write fixes to automatically remediate any issues found, removing the risk of human error across large repackaging projects.

Maintain your estate with ongoing update and patch compatibility analysis

AOK Manage-It provides ongoing Windows Update testing and patch impact management, ensuring an environment where changes can be introduced rapidly whilst vastly reducing the amount of time that the application estate remains under any possible security risk.

Automatically converts your applications into the virtual format of your choice in minutes

AOK VReady-It is an automated solution which converts on-mass your MSI application portfolio to a virtual application. AOK VReady-It can virtualise 100 applications a day, compared to the few that can be packaged manually.

AOK Project Suite provides AOK Test-It and AOK Fix-It as well as add-on modules AOK Virtualise-It and AOK QA-It in an integrated, easy to use toolset. This is the most cost-effective way to purchase the essential AOK functionality for your migration project.
