

madcap
CAPTURE™
V2

Who Needs MadCap Capture?

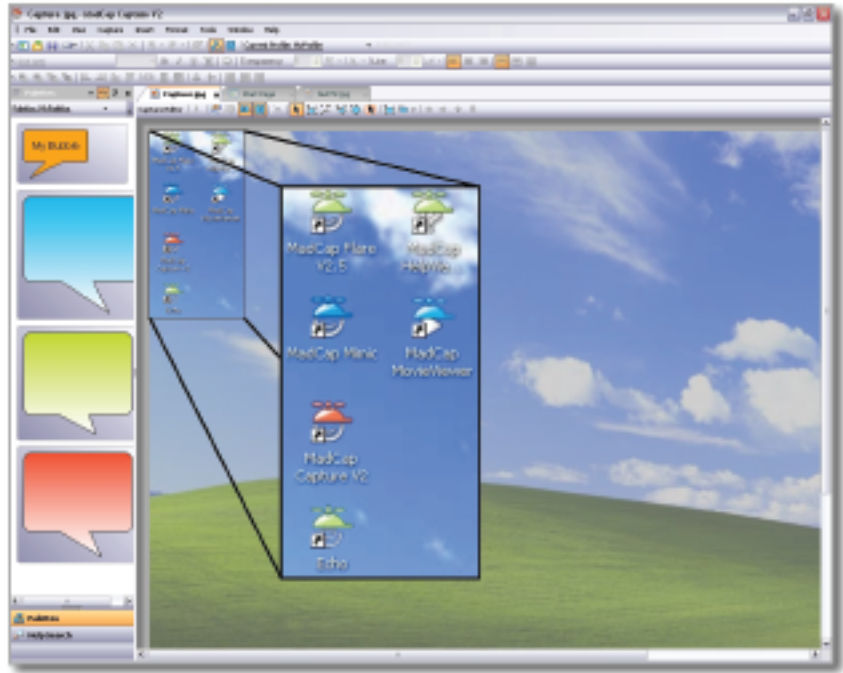

MadCap Capture is for anyone who needs to capture images from a computer display, but is indispensable for those who need to maintain and update screen captures over time. Capture is designed with the software development process in mind allowing users to continually update and improve their images through the software development process.

MadCap Capture is tightly integrated with other MadCap products, which allows you to take advantage of content created in other applications. For the ultimate experience in cross-product integration, check out the innovative variable support between MadCap Capture, Flare, and Mimic. This lets you single-source variables (reusable content) across all three products.

What is MadCap Capture?

Capture 2.0 is the newest version of MadCap's cutting-edge screen capture and graphics editing software, which is designed specifically to address the needs of documentation professionals.

Features:

Ease of Use

- Adjustable capture area - full screen, application, menu, region, etc.
- Editable layers for text or effects separate from the image
- Special effects to focus attention to specific areas
- Adjustable image scale
- Resize automatically
- Set custom resolution automatically
- Set custom color depth automatically
- Crop to standard size automatically
- Flexible interface

Single-Sourcing

- Use image profiles to define different image attributes for print or online
- Use variables to re-use content throughout images

Integration

- Shared palettes ensure consistency with MadCap Mimic
- Direct links from MadCap Flare into MadCap Capture
- Share variable libraries with MadCap Flare, supporting single sourcing across media types

Language Support

- Unicode capable for all left-to-right languages
- XML-based image property files can be used by translators in a third-party editor
