

madcap  
**ECHO**

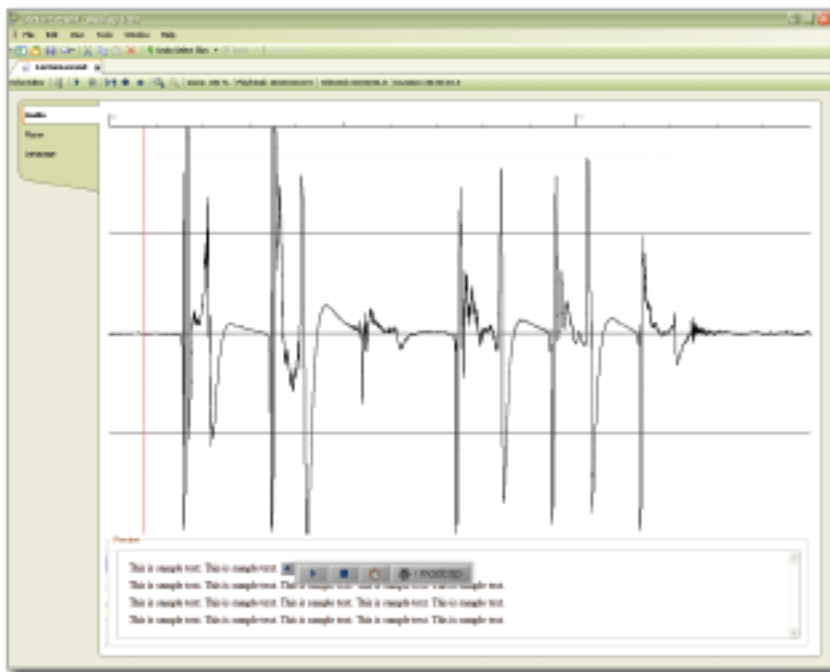

## What is MadCap Echo?

MadCap Echo is a unique application that provides an easy way for authors to create and incorporate state-of-the-art audio and customizable Flash controls into online output, and it works with industry-driven file formats such as XML, SWF, MP3, and WAV. The resulting possibilities range from simple narration to integration of cutting-edge Web 2.0 technologies like PodCasts directly into documentation projects.

## Who Needs MadCap Echo?

MadCap Echo is for anyone who wants or needs to easily add an audio component to their online publishing. Echo has tight integration with other MadCap Software products like Flare and Mimic, but can also be used as a stand alone tool for the recording, editing, and distribution of audio.

MadCap Echo also includes a dedicated Playback Control editor, allowing you to customize the look and feel of the playback controls to match your existing pages. Echo can be used by technical writers, Help authors, Web publishers, or anyone else who needs a quick and easy way to distribute audio content.

## Features:

### Work Flow

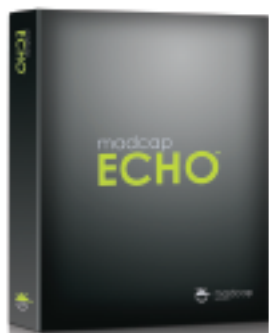

- Record live audio or import existing sound files
- Edit audio if/as necessary
- Save and deliver audio with the integrated player

### Integration

- Direct links from MadCap Flare into MadCap Echo

### Ease of Use

- Recording interface for capturing live audio
- Boost volume in quiet areas of recording
- Trim unwanted sections from the recording
- Insert silence if/where needed
- Customizable playback controls
- Works with industry standard file formats
- Command line compilation
